07.08.2025 События

On August 7, 2025, the State Agency on Intellectual Property (AGEPI) participated in the consultative session on the topic “Artificial Intelligence and Copyright”, organized by the National Training Center of the National Library of the Republic of Moldova (NLRM), an event dedicated to deepening the impact that new technologies, especially artificial intelligence (AI), have on copyright regulations.

The aim of this event is to provide librarians and cultural specialists with an in-depth understanding of the impact of AI on copyright.

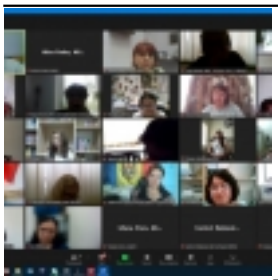

The consultative session addressed a wide range of topics, bringing up for discussion both the challenges and opportunities generated by the use of advanced technologies in the creation, distribution and management of copyright-protected content. Participants explored topics such as the legal protection of works generated by artificial intelligence, the limits of copyright enforcement in the digital context, and the need to adapt the national and international normative framework to new technological realities. The discussions highlighted the complexity of assigning copyright to works created with the help of AI, and also the importance of finding a balance between stimulating technological innovation and protecting the rights of creators.

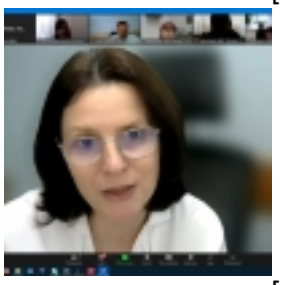

During the session, Liliana Vieru, Head of the Communication, International Relations and European Integration Department of AGEPI, put particular emphasis on the provisions of Law No 230/2022 on Copyright and Related Rights, which represents a significant step in the modernization of the legal framework of the Republic of Moldova in the field of intellectual property, explaining that Law No 230/2022 transposes the European Union directives, strengthening the protection of the rights of authors and holders of related rights. She stressed the importance of adapting legislation to the challenges brought by new technologies, especially artificial intelligence, which raises complex questions, such as the legal status of works generated by AI or liability in cases of unauthorized use of protected content. “It is essential to develop a legal framework that responds to technological dynamics, ensuring the protection of creators, and also fair access to information,” said Liliana Vieru.

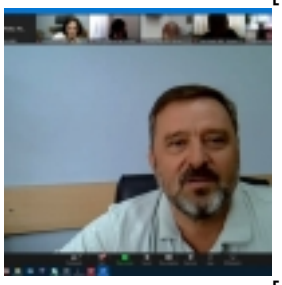

In his presentation “Book Collection: Between Purpose and Challenges”, Andrei Moisei, principal consultant ofAGEPI and trainer of the National Institute of Justice in the field of intellectual property, highlighted the essential role of library book collections in promoting knowledge, education and innovation, and also the challenges generated by the digital age in protecting copyright. Andrei Moisei stressed the need for a balance between public access to information and respect for creators’ rights, advocating for updated policies and practices that meet the needs of the digital society. “Artificial intelligence is rapidly transforming the way we create and consume content. It is essential to find solutions that protect copyright, and also encourage innovation,” said Andrei Moisei in his speech.

The event brought together librarians, cultural and intellectual property professionals, creating a dynamic platform for dialogue and exchange of ideas. The session was marked by an active exchange of views, with participants highlighting the importance of interinstitutional collaboration to find practical solutions to current challenges.

AGEPI reiterated its commitment to supporting public information and consultation in order to effectively implement intellectual property regulations. The agency continues to promote education and awareness in this area, contributing to the alignment of national legislation with international and European standards.
